Professional Summary

Senior Frontend Engineer with 4+ years of experience building scalable web applications using React.js, Next.js, TypeScript, and modern UI frameworks. Delivered 5+ production platforms across Web3, fintech, healthcare, and AI products with SEO optimization, real-time integrations, and wallet-based authentication. Strong in component architecture, performance optimization, and cross-functional delivery.

Technical Skills

- **Languages:** JavaScript, TypeScript, HTML, CSS, Tailwind CSS, Python, SQL
- **Frameworks and Libraries:** React.js, Next.js, Redux, Node.js, Express.js
- **AI and GenAI:** OpenAI APIs, LLM Integration, Retrieval Augmented Generation (RAG), AI SDKs, Prompt Engineering, Streaming APIs
- **Tools and Platforms:** Git, Bitbucket, MySQL, MongoDB, Firestore, Visual Studio Code, Cursor IDE, GitHub Copilot
- **Domains:** Web3, Blockchain Integrations, REST APIs, Responsive UI, Accessibility, SEO

Professional Experience

- **Netsmartz** — Mohali, India
  Senior Software Engineer - Frontend — *December 2025 – Present*
  - Develop scalable frontend architectures using React.js, Next.js, and TypeScript for enterprise applications.
  - Build reusable component libraries and improve Core Web Vitals through code splitting, lazy loading, and render optimization.
  - Partner with backend, product, and QA teams to ship accessible, responsive, and SEO-optimized user interfaces.
  - Establish frontend standards for code quality, testing, and maintainability across delivery teams.
- **Debut Infotech** — Mohali, India
  Frontend Engineer — *November 2024 – September 2025*
  - Led frontend delivery for 4 production Web3/fintech platforms, including PRC Coin (theprccoin.com), PRC Parental Ecosystem, RVA IDO, and Encrypted Cash ICO.
  - Implemented private sale flows, Web3 contract integrations, wallet authentication, and coin request workflows with page-level SEO metadata.
  - Built admin dashboards with secure buyer/advisor management, impersonation, KYC onboarding, and vesting schedule workflows.
  - Integrated real-time blockchain data for token sales, staking, and live balance updates across multi-stage IDO flows.
  - Collaborated with backend and blockchain teams to ship reliable smart contract interactions and production-ready frontend UX.
- **Cignex** — Remote
  Frontend Engineer — *January 2023 – November 2024*
  - Developed UI features and enhancements for the DSI HCP live system using React.js, Tailwind CSS, and Redux.
  - Provided ongoing frontend support for the DSI HCP platform, improving usability and consistency across modules.
  - Built proof-of-concept solutions for HCP One Link with Appian and presented frontend approaches to stakeholders.
- **Trantor Software Pvt. Ltd.** — Chandigarh, India
  Frontend Engineer — *February 2022 – September 2022*
  - Contributed to the Ziosk project by developing responsive frontend features using React.js.
  - Built an Employee Management Portal frontend with CRUD operations integrated with REST APIs using Express and Node.js.
  - Developed the Ziosk Support Portal frontend to fetch and display real-time data from Resilio monitors.
- **TCIL-IT** — Chandigarh, India
  Machine Learning Intern — *February 2021 – August 2021*
  - Implemented data visualization and applied machine learning models on historical datasets.
  - Built a fake job post detection system using natural language processing (NLP).

Projects

- **API Forge (Next.js, React.js, Tailwind CSS, GenAI):** AI-powered platform for designing, testing, and managing APIs with intelligent assistance (api-forge.netlify.app).
  - Built an AI-assisted API generation system using LLMs and prompt engineering to create endpoints dynamically.
  - Implemented API scoring, validation, and structured request/response generation.
  - Integrated streaming responses and AI SDKs for real-time feedback and interaction.
  - Designed a scalable UI for API testing, configuration, and reuse.
- **Difoi (React.js, Tailwind CSS):** Die management web application with role-based access control and modular workflows for industrial operations.
  - Designed multi-role user management (Admin, Advisor) with scoped module access.
  - Built modules for managing customers, vendors, and dies with structured data handling.
  - Implemented secure admin impersonation for account troubleshooting.
  - Developed responsive UI with optimized performance and scalable component architecture.
- **Synth UI (Next.js, React.js, Tailwind CSS, GenAI):** AI-powered UI generation tool that converts prompts and visual inputs into production-ready React components (synthui.netlify.app).
  - Developed prompt-to-UI generation using LLMs for dynamic React component creation.
  - Integrated image-to-component workflows for generating UI from design references.
  - Implemented real-time preview across desktop, tablet, and mobile breakpoints.
  - Used AI SDKs and streaming APIs for instant UI generation and updates.
- **RVA IDO Platform (React.js, Next.js, Redux, Web3, Tailwind CSS):** Blockchain token launch platform with multi-tier sales, KYC onboarding, and vesting management.
  - Built Web3 wallet-integrated sale flows with multi-stage pricing and real-time progress tracking.
  - Implemented KYC document upload, verification, and approval workflows.
  - Managed application state with Redux for live blockchain and sale data updates.

Education

- **Guru Nanak Dev Engineering College** — Ludhiana, India
  Bachelor of Technology, Computer Science and Engineering; CGPA: 7.2 — *2017 – 2021*

Relevant Coursework: Operating Systems, Data Structures, Algorithms, Artificial Intelligence, Machine Learning, Computer Networks, Databases

Achievements

- Winner, Idea Hunt startup competition organized by GradCapital.
- Radio Jockey at 90.8 MHz college radio station; hosted multiple community shows.
